## **MEMBERS OF CONFERENCE PLANNING COMMITTEE**

- Dr. Moses, John Billy (Chairman)** Science Education Department  
Faculty of Education, Niger Delta University  
Wilberforce Island, Bayelsa State.
- Ahueansebhor Emmanuel** Human kinetics and Sports Science Department  
Faculty of Science Education,  
University of Calabar,  
Calabar - Nigeria.
- Akanazu, Eze C.** Department of Chemistry  
Alvan Ikoku Federal University of Education, Owerri,  
Imo State, Nigeria
- Dr. Ofordum Maryann C.** Physical and Health Education Department  
Federal College of Education (Tech) Umuoze,  
Anambra State, Nigeria
- Dr. Esther B. Enaregha (Sec.)** Isaac Jasper Boro College of Education Sagbama  
Bayelsa State, Nigeria
- Dr. Njoku Celestine** Department of Mathematics and Computer  
Science Education, University of Calabar Cross  
River State, Nigeria

## **LOCAL ORGANIZING COMMITTEE**

- Mrs. Amaka Grace (Chairman)** Physical and Health Education Department  
Federal College of Education (Tech) Umuoze,  
Anambra State, Nigeria
- Ogbonna Marachi Samuel (Sec.)** Physical and Health Education Department  
Federal College of Education (Tech) Umuoze,  
Anambra State, Nigeria
- Usan Peter** Chemistry Department  
Federal Technical College, Awka,  
Anambra State, Nigeria

## **PROGRAMME OF EVENTS**

- Opening Praying
- Chairman's Opening Remark
- Breaking of Kola nut
- Welcome Address by the Provost of the College
- Welcome Address by the acting President of the Association
- Keynote Presentation by Dr. Peter I.I. Ikokwu
- Lead Paper Presentation by Dr. Emmanuel O. Okonta
- About the Electronic Book / Unveiling of Book Chapter – E-Book launch
- Item 7
- Meritorious Award
- Paper Presentations

**CHAIRMAN’S ADDRESS VENERABLE NNAMDI B. EMENDU PhD. PRESENTED  
DURING THE SECOND CONFERENCE OF THE ASSOCIATION OF SCIENCE  
EDUCATORS, ANAMBRA (ASEA) HELD AT ARCHBISHOP ALEXANDER CHIBUZO  
IBEZIM COLLEGE OF EDUCATION, NIBO-NISE, ANAMBRA STATE ON 9TH  
APRIL 2026**

**THEME: Innovation, Digital Transformation, and Sustainable Science Education in the  
21st Century**

Distinguished Professors, Esteemed Researchers, Academic Leaders, Policy Partners, Ladies and Gentlemen,

**Introduction**

It is my distinct honour and privilege to welcome you to the Second Conference of the Association of Science Educators. I extend warm greetings to our keynote speakers, paper presenters, research scholars, institutional representatives, and valued partners whose presence underscores the importance of this gathering.

Our theme — “Innovation, Digital Transformation, and Sustainable Science Education in the 21st Century” — speaks directly to the evolving mandate of higher education institutions and research communities in shaping scientific literacy, discovery, and societal progress.

**The Imperative for Academic Innovation**

Higher institutions have historically been the custodians of knowledge creation and dissemination. However, in the contemporary era marked by rapid technological advancement and global interconnectivity, the academy must transcend traditional pedagogical models. Innovation in schools is essential because it prepares students for the future, enhances learning experience, encourages creativity and curiosity, improve teaching methods, promoting problem solving skills, increases students engagement, supports inclusive education and keeps education relevant.

Innovation in science education within academia must be:

- 1. Research-driven** – informed by evidence-based pedagogical studies and discipline-based education research.
- 2. Interdisciplinary** – integrating science with technology, engineering, social sciences, and humanities to address complex global challenges.
- 3. Problem-oriented** – focusing on real-world applications, design thinking, and translational research.

Generally, our curricula must reflect not only foundational theories but also emerging scientific frontiers. We must continuously revise course content to incorporate developments in data science, artificial intelligence, climate science, biotechnology, and other rapidly evolving fields. Furthermore, innovation in academia demands that we reconsider assessment models. Are our evaluation frameworks measuring deep conceptual understanding, research competence, and critical thinking — or merely factual recall? The 21st century requires scholars who can analyze, synthesize, and innovate.

**Digital Transformation in Higher Education**

Digital transformation is important for schools because it improves how students learn, and how institutions operate. According to Hurb (2020), digital tools improve schools efficacy and enable better decision making through data. It enhances teaching and learning. Study by QECD (2019). shows that technology supports better learning outcome when combined with effective teaching practice. Likewise digital transformation helps to expand access to education. The world bank

(2020). highlight that digital learning helps researcher understands population and ensures during.

### **Sustainable Science Education: Institutional Responsibility**

Sustainability within science education must be understood in both environmental and systemic terms. As academic institutions, we bear responsibility for cultivating graduates who are equipped to confront global challenges such as climate change, biodiversity loss, food security, renewable energy transitions, and public health crises. Science education must therefore embed sustainability principles across curricula rather than isolating them within specialized courses.

Moreover, sustainable science education requires:

1. Strengthened research infrastructure.
2. Long-term funding commitments for scientific inquiry.
3. Mentorship pipelines for early-career researchers.
4. Gender and diversity inclusion in STEM disciplines.
5. Institutional policies that promote environmentally responsible campus practices.

Sustainability also means ensuring that our educational systems remain adaptable, resilient, and responsive to societal needs. Higher institutions must remain spaces where rigorous inquiry, ethical reflection, and innovation coexist harmoniously.

### **The Role of Academic Leadership in Innovation, Digital Transformation, and Sustainable Science Education**

As researchers, and academic leaders, our influence extends beyond lecture halls and laboratories. We must Champion inquiry-based learning and undergraduate research opportunities. We need to foster industry-academia partnerships to enhance experiential learning. We need to advocate for policy reforms that strengthen STEM education nationally and globally. Also, we need to mentor the next generation of scientists with integrity and intellectual humility. Our scholarly work must bridge theory and practice. Publications, policy briefs, and community outreach must reflect the societal relevance of our research endeavors.

Academic leadership must also prioritize education development programs that enable educators to integrate digital tools, innovative pedagogies, and sustainability frameworks effectively.

### **Conference Expectations and Scholarly Engagement**

This conference provides a vital platform for intellectual exchange. Over the coming sessions, we will engage with research findings, pedagogical innovations, technological applications, and policy perspectives that shape the future of science education.

I encourage participants to:

Share empirical evidence and best practices.

Engage in constructive critique and interdisciplinary dialogue.

Form collaborative research networks that extend beyond this conference.

Let this gathering generate not only discussions, but actionable frameworks and research agendas that inform institutional strategies.

### **Conclusion**

In closing, innovation, digital transformation, and sustainability are not isolated ambitions. They are interconnected imperatives that define the mission of modern academia.

If we are to remain relevant as institutions of higher learning, we must embrace transformation while preserving the core values of scholarship: rigor, integrity, curiosity, and service to humanity. Let us commit to advancing science education that is intellectually robust, technologically empowered, and socially responsible.

I thank you all for your dedication to this cause and wish us a conference marked by insightful deliberations, meaningful collaborations, and lasting impact.

Thank you.

**A WELCOME ADDRESS PRESENTED TO THE ASSOCIATION OF SCIENCE EDUCATORS ANAMBRA STATE AT ITS SECOND CONFERENCE ON THE THEME: INNOVATIONS, DIGITAL TRANSFORMATION AND SUSTAINABLE SCIENCE EDUCATION IN THE 21<sup>ST</sup> CENTURY.**

**REVD CANON DR H. O. N. BOSAH**

**AG. PROVOST, ARCHBISHOP ALEXANDER IBEZIM COLLEGE OF EDUCATION NIBO-NISE**

On behalf of the Proprietor of this citadel of learning, His Grace, The Most Revd Alexander Chibuzo Ibezim, Archbishop Ecclesiastical Province of the Niger and Bishop, Diocese of Awka, the College Governing Council, College Management and the entire College Community, I cordially welcome the Association of Science Educators, Anambra State and its cream of attracted conferees to Archbishop Alexander Ibezim College of Education, Nibo-Nise: A Centre Par Excellence in Teacher Education.

Conscious of the fact that that we are here for an intentional academic conference - a gathering where scholars and experts have deliberately gathered to foster meaningful discussions, collaborations, and knowledge sharing around a specified theme, quite different from mere traditional conference; engagement, interaction, and outcomes are set to be prioritized over mere presentation of papers. We are therefore here for a curated dialogue, rather than mere series of lecture presentations.

Lead discussions on innovations, digital transformation and sustainable science education in the 21<sup>st</sup> century shall consequently be interrogated as a theme, across academic seniority levels, diverse experiences, and intellectual interests among the conferees. Focus on how learning, networking, exploring and how digital transformation will impact research areas will be anticipated. Sharing experiences, application discussions, inter disciplinary interactions and collaborative explorations will not be left out .

Research papers will therefore be anticipated from diverse areas of interests, such as data-driven research; digital tools & methods with modeling, computational techniques; collaboration & data sharing enhanced through digital platforms; open science initiatives and impacts on disciplines, simulation and predictive modeling.

Finally, sharing insights, and shaping future development directions would apparently constitute a path finder to the Conference colluding remarks. Panel discussants will constitute the much needed brainstorming in this conference.

We earnestly pray that the conference turns out a huge success, with a scholarly proceeding and publication that will positively project the association in the community of sound academics. This second conference shall not be the last but an improvement on previous ones with sustainable qualitative development in the future.

Revd Canon Dr H. O. N. Bosah

Ag. Provost, Archbishop Alexander Ibezim College of Education Nibo-Nise.

**MERITORIOUS AWARD  
CITATION OF DR. SULEIMAN DAMBAI MOHAMMED**

Dr. Suleiman Dambai Muhammed was born to the family of Mallam Mohammed Ozaki Toto in Toto Local Government Area of Nasarawa State on 2nd June 1961. He attended Government Teachers' College Wukari from 1975-1980. He proceeded to the prestigious Ahmadu Bello University Zaria, first to Institute of Education from 1985-1989 and then Faculty of Education from 1990-1995 where he obtained his NCE and B.Sc Ed. (integrated Science)

After his First Degree, Dr. Suleiman proceeded to University of Jos Plateau State, where he obtained M.Sc (Ed) Biology in 2003. He later enrolled and obtained his Ph.D in Science Education in University of Abuja (Nigeria) in 2016.

Dr. Suleiman started his work Career as a Lecturer III in Nasarawa State College of Education Akwanga from 1998-2002. He later transferred his services to FCT College of Education, Zuba-Abuja as Lecturer II in 2002 and rose through the ranks to the Chief Lecturer in 2017. In 2020 he transferred his services to Federal University of Lafia Nasarawa State as Senior Lecturer. In 2023; he was promoted to the rank of Associate Professor by the University.

During his career, he had served as Head of Department, Member Junior Staff, Appointment Promotion and Disciplinary Committee, Etc in both Colleges (College of Education Akwanga and Zuba).

In recognition of his astute leadership qualities and administrative acumen, he was appointed as Acting Head of Department, Science Education in 2022 by the Vice Chancellor, Professor Shehu AbdulRahman, The position he is still holding till date. He is a Member of the Senate of the University of Lafia.

Dr. Suleiman has some honors and distinctions to his name. Some of them are; The Best Lecturer, the Best Teaching Practice Coordinator and the Best Head of Department of FCT College of Education Zuba 2007, 2009 and 2012 respectively.

Dr. Suleiman has over forty (40) publications in reputable Journals both nationally and internationally, numerous papers presented at National and International Conferences, contributions to chapter in Textbooks and a number of Textbooks

He is a member of the following organizations: International Research and Development Institute (Research and Development Network) from 2012 to date; Academic Staff Union of Universities (ASUU); Teachers' Registration Council of Nigeria (TRCN) etc.

Amongst countries he has visited are Singapore, Saudi Arabia, and Dubai. He is married with Children.

He is now an Associate Professor with the Federal University of Lafia, Nasarawa State.

## FOREWORD

It is with great pleasure that I present this conference proceedings, which brings together a rich collection of scholarly works centred on digital literacy and its transformative role in contemporary education. The articles featured in this volume, collectively reflect the growing recognition that digital competence is no longer optional but essential for effective teaching, learning, and sustainable development in the 21st century.

A dominant theme across the contributions is the critical role of digital literacy in enhancing students' academic achievement, particularly in core subject areas such as Mathematics, Chemistry, Biology, and Basic Science. Several studies in this volume establish digital literacy competence as a strong predictor of learners' performance, while also demonstrating how innovative instructional strategies such as science video instruction and virtual learning environments can significantly improve learning outcomes.

The proceedings also highlight the importance of equipping educators with the necessary digital skills. Papers examining teachers' digital competence, awareness, and utilization of educational technologies reveal both progress and gaps, underscoring the urgent need for continuous professional development. Contributions focusing on tools such as Google Classroom and Google Scholar further illustrate how accessible technologies can enrich teaching practices and expand learning opportunities when effectively deployed.

Another notable strand of research in this collection explores personalized and technology-driven learning approaches. Studies on online platforms, personalized learning environments, and digital assessment practices demonstrate how technology can support learner-centred education and foster improved engagement and achievement. These insights are particularly relevant in advancing flexible and inclusive education systems.

Beyond classroom practice, the proceedings also address broader systemic and societal dimensions. Papers examining the sustainability of academic programmes within current economic realities, as well as the role of digital education in promoting national development, provide valuable perspectives for policymakers and educational leaders. Additionally, interdisciplinary contributions such as those linking digital literacy with physical and health education and environmental monitoring systems underscore the expanding scope of digital competence across diverse fields.

Collectively, the papers in this volume make a significant contribution to knowledge by providing empirical evidence, practical insights, and innovative approaches to integrating digital literacy into education. They not only deepen our understanding of current challenges but also offer actionable pathways for improving teaching and learning in Nigeria and beyond.

It is my hope that this compilation will serve as a valuable resource for researchers, educators, policymakers, and all stakeholders committed to advancing education through technology. May it inspire further inquiry, collaboration, and innovation in the pursuit of quality and sustainable education.

**Telima Adolphus, FHEA.**  
**Professor of Science Education,**  
**Rivers State University.**

## PREFACE

This years' conference on innovations, digital transformation and sustainable science education in the 21<sup>st</sup> century is meant to educate and re-educate science educators effectively. It exposed educators towards evolving scientific and technological world. Science educators must embrace digital tools and resources to enhance their teaching methods, re-structure learners' mindset, foster students' scientific literacy, critical thinking and problem-solving skills. This includes leveraging online platforms, using educational technologies and digital content to create engaging and meaningful learning experiences.

In this conference proceedings efforts has been made towards promoting the use of digital tools in science education.

**Prof. Josephine N. Okoli**

Nnamdi Azikiwe University, Awka,

Anambra State, Nigeria.

**ADDRESS OF THE ACTING PRESIDENT OF ASSOCIATION OF SCIENCE  
EDUCATORS ANAMBRA (ASEA), DR. JOHNBOSCO ONYEKACHUKWU  
OKEKEKOSISI; AT THE OPENING CEREMONY OF THE 2<sup>ND</sup> ANNUAL  
CONFERENCE HELD AT ARCHBISHOP ALEXANDER IBEZIM COLLEGE OF  
EDUCATION NIBO-NISE, ANAMBRA STATE, NIGERIA ON 9<sup>TH</sup> APRIL, 2026.**

The chairman of the occasion, Dr. Ven. Nnamdi Emendu,  
Mother of the Day, Dean School of Science Education, Federal College of Education  
(Technical) Umunze, Dr. Stella O. Okoli.  
Special Guest of Honor, Deputy Mayor Anambra East, Hon. Lady Dr. Martina Nwawube  
The Executive Provost of ArchBishop Alexander Ibezim College of Education, Nibo- Nise,  
Revd. Canon Dr. H.O.N. Bosah  
Our Esteemed Keynote and lead Paper Presenters, Drs: Peter I.I. Ikokwu, Emmanuel O. Okonta  
Meritorious Awardee: Suleiman Dambai Mohammed  
The Local Organizing Committee (LOC)  
My Fellow Science Educators,  
Distinguished Guests,  
Ladies and Gentlemen

I am highly delighted to extend a warm royal welcome to you all at the opening ceremony of the 2<sup>nd</sup> Annual Conference of Science Educators Anambra (ASEA) on the **Theme: Innovations, Digital Transformation and Sustainable Science Education in the 21<sup>st</sup> Century.**

I welcome most heartily the Executive Provost of ArchBishop Alexander Ibezim College of Education, Nibo- Nise, Revd. Canon Dr. H.O.N. Bosah, the chairman of the occasion Dr. Ven. Nnamdi Emendu, Special Guest of Honour, Deputy Mayor Anambra East, Hon. Lady Dr. Martina Nwawube, our erudite mother of the day Dr. Stella O. Okoli, Dean School of Science Education, Federal College of Education (Technical) Umunze for honoring our invitation. Your presence is a great source of inspiration and we are grateful for your unwavering support towards science education in the state.

**To our Host**, Board of Directors Prof. Josephine N. Okoli, Prof. Isaac N. Nwankwo and Prof. M.C. Anaekwe, Local Organizing Committee (LOC), I say thank you for you have worked round the clock towards the success of this year's conference.

**Special thanks** also go to our Meritorious Awardee, Dr. Suleiman Dambai Mohammed whose contributions to teaching and learning in tertiary institutions lead to the foundation of our members.

We have gathered not just to deliberate on academic issues but to collectively reflect and shape our minds on possible ways to educate learners and re-educate ourselves on **“innovations, digital transformation and sustainable science education in the 21<sup>st</sup> century”**. The stated conference theme is very apt considering the fact that we are in the digital age and are advocating for possible ways to educate learners for fast, easy understanding and recall.

**Participants** will be taken through hands-on and minds-on activities in various sessions and they will find the conference package very rewarding. I invite you to pay attention during keynote address to be presented by Dr. Peter I.I. Ikokwu, Nwafor Orizu College of Education, Nsugbe, Anambra State, Nigeria. Your continuous attention is also needed during the lead paper presentation of Dr. Emmanuel O. Okonta, Dean Students Affairs, Federal College of Education (Technical) Asaba Delta State, Nigeria.

**To all participants** – educators, researchers, students, policy makers – thank you for making out time to be here. Your presence signifies hope for the future of science education. I urge you to make the most of this gathering by networking, exchanging ideas and exploring new strategies to embed innovative and digital practices in science classroom and curricula.

**As we officially** declare this conference open, let us do so with a shared sense of purpose and vision. Let us reflect, discuss intelligently and leave this gathering better equipped. May our deliberations be fruitful and beneficial to all .

Thank you and God bless you all.

**Dr. JohnBosco O.C. Okekeokosisi**

**Ag. President ASEA**

**9<sup>th</sup> April, 2026**

**A KEY NOTE ADDRESS PRESENTED AT 2<sup>ND</sup> CONFERENCE OF THE  
ASSOCIATION OF SCIENCE EDUCATORS ANAMBRA ON APRIL 09, 2026**

**THEME: INNOVATION, DIGITAL TRANSFORMATION AND SUSTAINABLE  
SCIENCE EDUCATION IN THE 21<sup>ST</sup> CENTURY.**

**Harnessing Innovation and Digital Transformation for Sustainable Science Education in the 21<sup>st</sup> century**

I am honored and indeed humbled to speak at this esteemed conference of the Association of Science Educators Anambra . As we gather here today, we recognize the pivotal role science education plays in shaping the future of our nation. The theme of this conference, "Innovation, Digital Transformation and Sustainable Science Education in the 21<sup>st</sup> century" is particularly apt, as it highlights the need for a paradigm shift in our approach to science education. I also see it as a veritable follow up on the theme of our maiden conference, "Science Education and Digital Literacy in the 21<sup>st</sup> Century", which provided the tools for the implementation of the obvious demands of this conference. I commend the organizers proper articulation

**The Challenge Before Us**

Nigeria's science education sector faces numerous challenges, including inadequate infrastructure, outdated curricula, and a shortage of skilled teachers. These challenges hinder our ability to produce globally competitive scientists and innovators. According to UNESCO(2022), Nigeria has one of the lowest science literacy rates in the world, with only 22% of students achieving a minimum level of proficiency in science. This is unacceptable, given the critical role science plays in driving economic growth and development. To give a broader look at the theme, the key factors in the were briefly discussed.

**Innovation in Science Education**

Innovation is key to driving sustainable science education. We must:

1. ***Foster inquiry-based learning:*** Encourage curiosity, creativity, and problem-solving skills. This involves shifting from a teacher-centered to a student-centered approach, where students are encouraged to explore, investigate, and discover concepts on their own.
2. ***Industry-academia collaboration:*** Foster partnerships to develop relevant curricula and provide real-world experiences. This includes collaborations with industries to provide internships, mentorship, and research opportunities for students.
3. ***STEM education:*** Emphasize science, technology, engineering, and mathematics to equip students with skills for the future. This includes promoting interdisciplinary approaches to learning, where students work on real-world problems that require integration of multiple subjects.

**Digital transformation**

Digital transformation is the strategic integration of digital technologies into all areas of an organization to improve operations, enhance customer experience, and sustain competitive advantage.

**Definition and Purpose**

Digital transformation involves **rewiring an organization** to continuously deploy technology at scale, enabling improved efficiency, innovation, and value creation. It is not a onetime project but an ongoing journey that reshapes how businesses operate, interact with customers, and

deliver products or services. The ultimate goal is to **meet evolving customer expectations** edge in a rapidly changing digital landscape.

### Key Components

1. **Strategy and Roadmap:** A clear digital transformation strategy focuses on specific domains such as customer journeys, processes, or functions that generate significant business value. A detailed roadmap guides the implementation of solutions and allocation of resources.
2. **Technology Integration:** Organizations adopt technologies like **cloud computing, big data analytics, AI, mobile applications, and social media platforms** to modernize operations and create new revenue streams.
3. **Talent and Culture:** Successful transformation requires a strong inhouse digital talent pool, agile HR processes, and a culture that encourages innovation and collaboration.
4. **Operating Model:** Scalable operating models, such as digital factories, product and platform models, or enterprisewide agility frameworks, support cross-functional teams and largescale digital initiatives.
5. **Change Management:** Digital transformation is as much about **organizational change** as technology adoption. Leadership alignment, employee engagement, and continuous monitoring of key performance indicators (KPIs) are essential.

### Benefits

- **Enhanced Customer Experience:** Personalized, seamless interactions across channels.
- **Operational Efficiency:** Streamlined processes and reduced costs.
- **Innovation and Growth:** Ability to create new products, services, and business models.
- **Resilience and Agility:** Faster adaptation to market changes and emerging technologies.

### Sustainable Science Education

Sustainable science education is a critical component of the 2030 Agenda for Sustainable Development, aiming to equip learners with the knowledge, values and skills necessary to address complex environmental and social challenges. Taylor in Emendu(2018) presented sustainable development as development that continues to meet today's needs in ways that will not jeopardize future generations. UNESCO(2023) observed that sustainable science education requires a multifaceted approach:

1. Curriculum reform: Develop curricula that address local challenges and global trends. This includes incorporating emerging fields like artificial intelligence, biotechnology, and renewable energy into the curriculum.
2. Teacher training: Provide continuous professional development for educators. This includes training on digital literacy, pedagogical integrates learning, skills, and knowledge to achieve global goals and promote sustainable development.
3. Development: Invest in modern laboratories and equipment. This includes leveraging public-private partnerships to upgrade infrastructure and provide access to cutting-edge technology. The 2030 agenda integrates learning, skills, and knowledge to achieve global goals and promote sustainable development

**UNESCO's ESD for 2030:** This program produces and shares knowledge, offers policy guidance, and implements projects on the ground to strengthen countries' capacity to provide quality climate change education and 'green' every aspect of learning.

- **Science Education in Nigeria:** Functional science education is urgently required to promote scientific knowledge for sustainable development, with a focus on practical skills for individual and national development.
- **Science on Stage Germany:** This project offers STEM teachers wide range of hands-on teaching materials to develop 21<sup>st</sup> century skills and promote skills and knowledge in the classroom.

These initiatives reflect a global commitment to integrating sustainability into science education, ensuring that students are equipped to make informed decisions that benefit both the environment and society.

### **Innovation, Digital Transformation and Sustainable Science Education in the 21st Century**

The 21st century is characterized by rapid technological advancements and evolving societal needs, prompting a significant transformation in education systems globally. This includes the integration of technology, the development of essential 21<sup>st</sup> century skills, and the prioritization of student centered learning. These shifts enhance student engagement and performance while contributing to more inclusive and equitable learning environments. Innovative practices and adaptive strategies are essential for addressing these challenges. They promote creativity, critical thinking, collaboration, and resilience, which are vital for preparing learners to navigate the complexities of a rapidly changing world.

The integration of digital technologies in education is a powerful tool for advancing Sustainable Development Goals (SDGs) and fostering behavioral shifts toward sustainability. Digital education offers opportunities to integrate SDGs across all levels and forms of education, responding to evolving needs and challenges. UNESCO supports the use of digital innovation to expand access to educational opportunities, advance inclusion, and enhance the relevance and quality of learning. It promotes digital inclusion and guides international efforts to accelerate progress toward education goals.

By embracing these changes, education systems can better equip students for success in a complex, interconnected global landscape. Recent innovations in science education are transforming teaching and learning through technology integration, personalized learning, and immersive experiences.

### **Key Innovations in Science**

**Technology Integration:** The use of **virtual reality (VR)** and **augmented reality (AR)** is becoming increasingly prevalent in science classrooms. These technologies allow students to engage in immersive learning experiences, such as exploring the human body or conducting virtual experiments, which enhance understanding of complex scientific concepts.

**Artificial Intelligence (AI):** AI driven personalized learning systems are being implemented to tailor educational experiences to individual student needs. These systems can adapt the difficulty of materials based on performance, provide real time feedback, and automate grading, making learning more efficient and effective.

**Interactive Simulations:** Interactive simulations are being used to create engaging learning environments where students can experiment and visualize scientific phenomena. This hands-on approach helps students grasp difficult concepts and fosters critical thinking skills.

**Interdisciplinary Approaches:** There is a growing recognition of the importance of integrating science education with other disciplines, such as technology, engineering, and mathematics (STEM). This interdisciplinary approach prepares students for real world challenges and promotes a more holistic understanding of scientific principles.

**Focus on Equity and Inclusion:** Innovations in science education are also addressing issues of equity and inclusion. Programs are being developed to recruit and retain diverse educators and to create inclusive learning environments that support all students, particularly those from underrepresented backgrounds.

### **Science Education Innovations - Full Analysis (Updated 2024)**

1. **Babbel - Innovative Language Learning for Science Education**
2. **PIMSLEUR - Innovative Language Learning for Science Education**
3. **MONDLY - Revolutionizing Science Education Globally**
4. **Rosetta Stone - Master Language Learning with Ease**
5. **LingQ - Innovative Language Learning Platform**
6. **Memrise - Innovative Language Learning Platform**
7. **Busuu - Language Learning Made Simple and Effective**
8. **ITALKI - Personalized Language Learning Platform**
9. **Skillshare - Empowering Creative Learning Worldwide**
10. **VARISITY TUTORS - Personalized Learning Solutions**

### **Conclusion**

The landscape of science education is rapidly evolving, driven by technological advancements and a commitment to improving learning outcomes. By embracing these innovations, educators can create more engaging, effective, and inclusive science learning experiences that prepare students for the challenges of the future. As these trends continue to develop, they will play a crucial role in shaping the future of science education.

### **The Digital Imperative**

The digital revolution has transformed every aspect of our lives, including education. To remain relevant, science education must leverage digital tools and technologies. They include:

1. **E-learning platforms:** Online resources and virtual labs can enhance learning outcomes and increase access to quality education. For instance, platforms like Coursera and edX have democratized access to global knowledge, allowing students to access top-class courses from anywhere in the world.
2. **Digital literacy:** Educators must develop skills to effectively integrate technology into their teaching practices. This includes using tools like simulations, animations, and games to make learning more engaging and interactive.
3. **Data-driven instruction:** Leveraging data analytics to inform teaching and learning. By analyzing student performance data, educators can identify areas of strength and weakness, tailor instruction to meet individual needs, and improve learning outcomes.

### **Case Studies: Success Stories in Nigeria**

There are several success stories in Nigeria that demonstrate the impact of innovation and digital transformation in science education. For instance:

1. The African Leadership in Science Program (ALSP) has trained over 1,000 science teachers in Nigeria, improving science education in over 500 schools.
2. The Nigeria Science Foundation has invested over ₦1 billion in science education projects, including the development of science clubs and competitions.

As educators, we have a critical role in shaping Anambra and indeed Nigeria's future. By harnessing innovation and digital transformation, we can create a sustainable science education system that produces globally competitive scientists and innovators.

**Let us work together to:**

3. Develop a digitally enabled science education system
4. Foster a culture of innovation and inquiry
5. Build partnerships for sustainable science education

Together, we can create a brighter future for Nigeria through science education.

**Recommendations**

The national education sector should:

1. Establish a national policy on science education that prioritizes innovation and digital transformation.
2. Invest in digital infrastructure and teacher training programs.
3. Foster partnerships with industries and international organizations to support science.

## LEAD PAPER PRESENTATION OF THE CONFERENCE

### THEME: INNOVATION, DIGITAL TRANSFORMATION AND SUSTAINABLE SCIENCE EDUCATION IN THE 21<sup>ST</sup> CENTURY.

Okonta, Okechukwu Emmanuel (PhD, FNCS, MCPN, MIAENG)

#### **The Symbiotic Triangle: Weaving Innovation, Digital Transformation, and Sustainability into 21st Century Science Education**

##### **Introduction**

The 21st century is defined by its dual, often contradictory, nature. It is an era of breathtaking innovation and Digital Transformation, where artificial intelligence can diagnose diseases and virtual reality can transport a student to the surface of Mars. And it is also an era of profound, interconnected crises—climate change, biodiversity loss, and persistent social inequality—that collectively threaten the sustainable future of our planet. At the crossroads of this paradox lies education, specifically Science Education. The central challenge for educators and policymakers is no longer simply about equipping students with scientific facts, but about fostering the complex competencies needed to navigate an uncertain future.

In this context, science education cannot remain static. It must evolve to prepare learners not just to consume knowledge, but to innovate solutions, leverage digital tools responsibly, and act sustainably at all times. Therefore, there must be a pedagogical shift towards sustainability competencies and a deep, structural integration of digital technology.

However, as evidence from international bodies and cutting-edge research makes clear, *technology alone is not a panacea*. True transformation occurs not when digital tools are used as a substitute for traditional methods, but when they are deliberately deployed to enable inquiry-based, collaborative, and real-world learning that prepares students to become active agents of a more sustainable world.

Furthermore, we can assert that the future of effective science education lies at the intersection of three powerful forces: *Innovation, Digital Transformation, and Sustainability*. These are not isolated trends but rather the vertices of a symbiotic triangle. Innovation provides the pedagogical drive to rethink how we teach; digital transformation offers the tools and infrastructure to scale and deepen this new pedagogy; and sustainability provides the critical purpose and context—the "why"—those grounds learning is the most pressing challenges of our time. This lead paper will explore each vertex and demonstrate how their convergence creates a robust framework for preparing a generation of uncompromising scientists, digital citizens, and undeterred innovators capable of thriving in and healing the world.

##### **Innovation as the Catalyst for Modern Science Education**

For decades science education was often a didactic transfer of facts, formulas, and established theories. In today's world, this is no longer sufficient. The 21st century, demands a different approach. Innovation in pedagogy means shifting the focus from learning about science to doing science.

##### **Redefining the "Scientific Method" for the 21st Century**

The traditional, linear scientific method is being augmented by more iterative, collaborative, and interdisciplinary approaches. Projects across Europe exemplify this shift. The **InNature** project,

for instance, introduces biomimicry as a core pedagogical framework. Instead of simply reading about natural phenomena, students are challenged to "understand, learn from and copy the strategies used by living things, with the intention of creating sustainable, innovative designs and technologies". This is innovation in action—teaching students to view nature not just as a subject to be studied, but as a database of proven solutions to be emulated.

**Diagram 1: Biomimicry Design Spiral**  
**From Rote Learning to Inquiry-Based Exploration**

## Biomimicry

Biomimicry is the innovation method of studying nature's models, systems, and processes to solve complex human problems sustainably. By emulating natural forms (design), processes (chemistry), and ecosystems, it aims to create more efficient and regenerative technologies. Common synonyms include bio-inspired design, biomimetics, and nature-based innovation

## **LESTO (Learn and Experience Science Together Online) - Education**

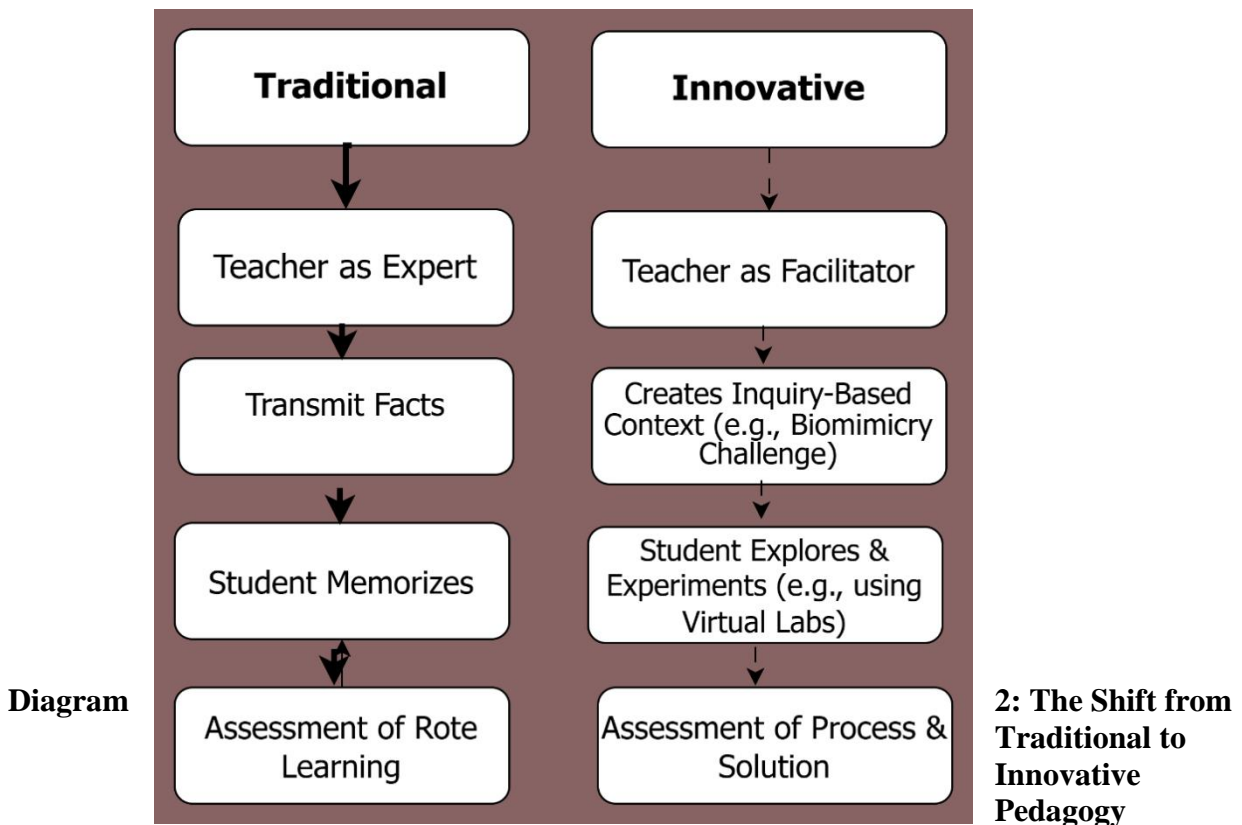

- **Context:** This project was developed as a direct response to the COVID-19 pandemic, which forced school closures and interrupted practical science teaching.
- **Focus:** It aimed to create a "Hands-on Science Education Platform" to combine practical, physical science kits with digital tools, aimed at students aged 10–14.
- **Post-COVID Impact:** Even beyond the immediate pandemic, the project addresses ongoing needs for digital tools, improved student engagement, and increased equity in education for disadvantaged students and girls.

Innovation also means breaking down the classroom walls. The TASTE project uses planetariums as immersive learning environments, allowing students to "move closer" to distant objects, feel the enormity of space or speed up time". This experiential framework moves learning from abstract reception to tangible, emotional experience, dramatically increasing motivation.

Similarly, the LESTO project, born out of the necessity of the COVID-19 pandemic, developed an online platform for hands-on science experiments. This ensures that even in remote settings, or for students from disadvantaged backgrounds, science learning remains an active, inquiry-based process. These examples demonstrate that pedagogical innovation is about creating active, engaging, and context-rich experiences that foster genuine curiosity and deeper cognitive

TASTE Project (Erasmus+): *The Teaching ASTronomy at educational level (TASTE) project is a European initiative involving planetariums and science centres that uses digital dome technology to teach topics like seasons and space sciences to students.*

processing.

### Digital Transformation—The Scaffolding for Deeper Learning

If innovation is the catalyst, digital transformation provides the essential scaffolding. It is the ecosystem of tools, platforms, and data that makes new forms of learning possible, accessible, and scalable. This goes far beyond simply replacing chalkboards with interactive whiteboards; it is a fundamental shift in the infrastructure of learning.

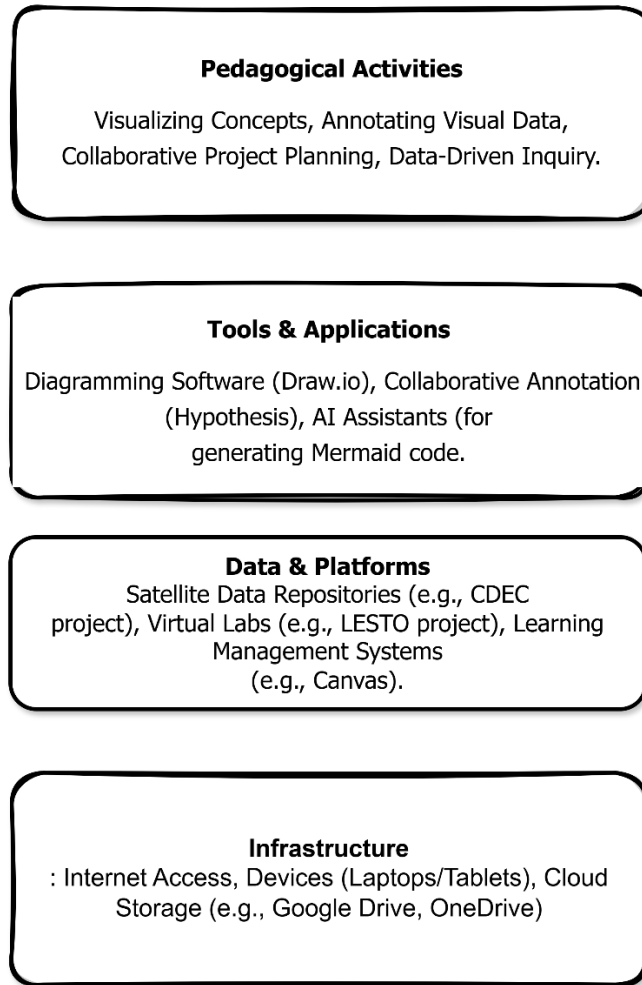

### The Digital Toolkit: From Virtual Labs to Satellite Data

The modern science classroom is no longer confined to a single room. It extends into virtual spaces and draws upon professional-grade data. The LESTO project's online portal for science experiments allows students to safely "carry out science experiments online and receive feedback from teachers and peers". Even more powerful is the use of authentic scientific data. The CDEC (Climate Data Entrepreneurial Club) project at the University of Paderborn brings "freely available European geo and earth observation data" directly into the hands of students. Learners in grades 10-13 use actual satellite data to develop their own sustainability projects, acquiring expertise in computer science and data analysis in the process. This is digital transformation at its most potent—democratizing access to the same tools that professional climate scientists use.

### **Fostering Collaboration and Visual Literacy**

Digital tools also revolutionize how students interact with information and each other. The ability to create, manipulate, and annotate visual representations is a key 21st-century skill. Tools like Draw.io enable students to build "concept maps," "scientific illustrations," and "process flows," which are high-impact instructional strategies with significant effect sizes on learning. Concept mapping, for example, helps students move towards the "Relational" and "Extended Abstract" levels of understanding by visually linking ideas.

Furthermore, collaborative annotation tools like Hypothesis now allow for "image annotations," enabling students and teachers to place pins and comments directly on "charts, graphs, and other visuals in online PDFs". This "brings the full page into the conversation," allowing for rich, collaborative deconstruction of complex scientific diagrams and data visualizations. The Victorian government's educational strategy even formalizes this as "joint construction of visual representations," where students collaboratively annotate maps and diagrams to design solutions for local environmental problems.

**Diagram 3: The Layers of Digital Transformation in Education**

## **Sustainable Science Education—The Guiding Light**

Innovation and digital tools, while powerful, remain directionless without a guiding purpose. In the 21st century, that purpose must be sustainability. A Nature Collection on "Education in the Anthropocene" argues that education is the key to "producing sustainability-oriented technologies, and their integration with everyday societal needs". It posits that a misalignment between technological innovation and societal understanding risks creating a world with advanced green technologies that populations cannot afford, integrate, or accept.

---

***Education in the Anthropocene focuses on fostering ecological literacy, systemic thinking, and agency to prepare learners for a rapidly changing planet where human activity shapes Earth's systems. It moves beyond traditional curricula to emphasize interconnectedness, sustainability, and action-oriented approaches that foster resilience, ethics, and "planetary health" in response to environmental crises.***

***ScienceDirect.com***

---

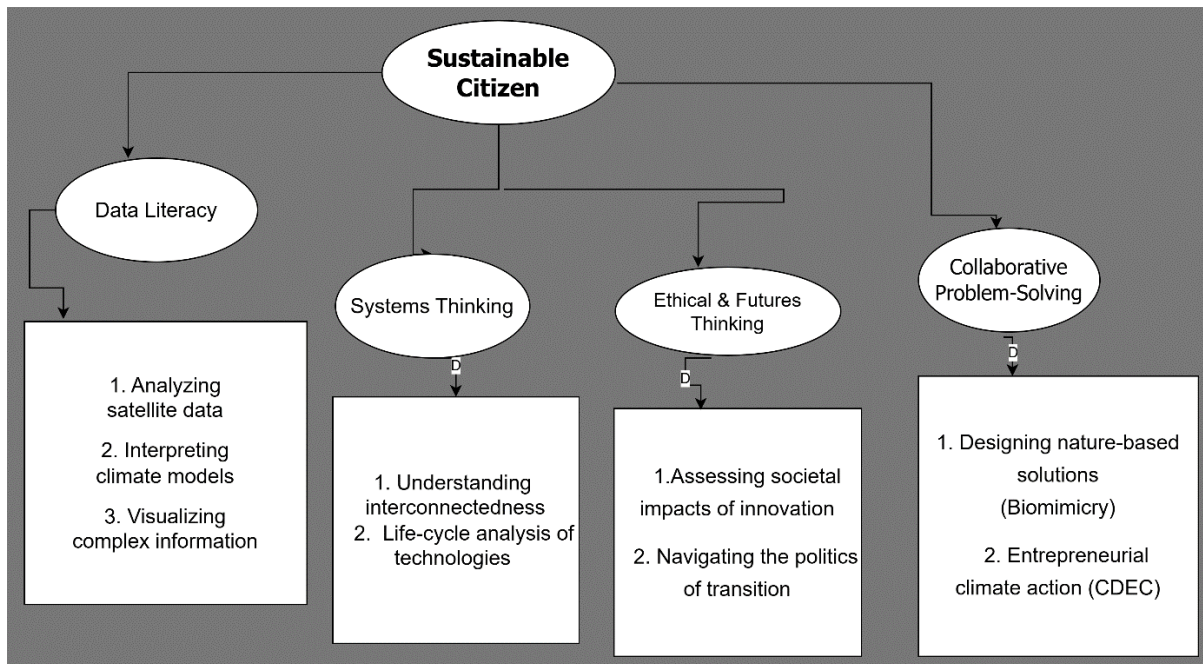

## **Education for the Anthropocene: A New Foundational Ethos**

Sustainable science education, therefore, is not just an add-on topic about recycling or climate change. It is a foundational principle that frames all scientific inquiry. It asks students to consider the socio-economic realities, ethical implications, and long-term impacts of scientific and technological solutions. The **SHORE** project embodies this by aiming to "increase scientific literacy about European seas and rivers" and directly supports the EU Mission to "Restore our Oceans and Waters". Students are not just learning marine biology; they are engaging in "blue curricula" to actively safeguard biodiversity.

## **Developing Competencies for a Green and Digital Transition**

***The Shore Project (Shore - School Outreach for Ocean Restoration) Is A Horizon Europe-Funded Initiative Empowering Schools to Promote Blue Sustainability in Five Key European Regions: Baltic, Black, Mediterranean, Danube, And Rhine. It Provides Up To €10,000 In Grants Per School Project to Foster Ocean Literacy, Empowering Youth to Become Agents of Change in Water Protection.***

This new focus demands a new set of competencies. Students must learn to navigate the "interconnected matrix (human-economic-societal)" that determines whether a sustainability-oriented technology succeeds. This involves critical thinking about "values embedded in the transition economy" and understanding the "societal barriers" to change. The interdisciplinary approach of the CDEC IT/ Technology Services, which brings together geography, computer science, and entrepreneurial education, is a direct response to this need, training teachers to help students become "data literate" and apply that literacy to climate action. The goal is to create citizens who can not only understand a graph of rising CO<sub>2</sub> levels but can also use data to advocate for and implement local solutions.

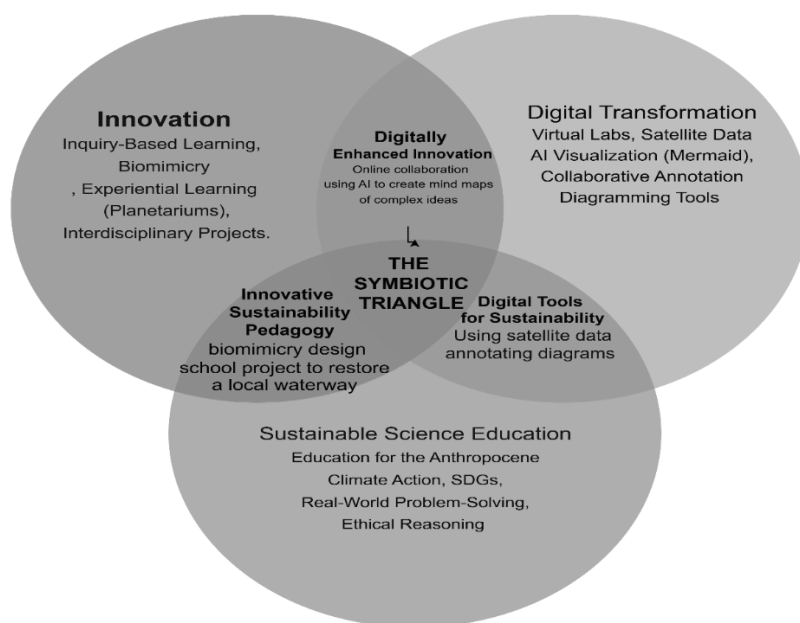

**Diagram 4: Competencies for the Green-Digital Transition**

### Synthesis: The Symbiotic Triangle in Action

The true power of this framework is revealed when all three vertices—Innovation, Digital Transformation, and Sustainability—converge. They do not operate in silos but in a state of dynamic synergy.

- Digital tools enable innovative pedagogies for sustainability. The CDEC project is a perfect illustration. It uses digital transformation (satellite data, AI tools) to fuel pedagogical innovation (project-based, entrepreneurial learning) with the explicit goal of sustainability (climate action projects). The digital data is the raw material, the innovative project format is the process, and climate protection is the purpose.
- Innovation redefines how we use digital tools. The move towards "joint construction" and "image annotation" represents a pedagogical innovation in how we use technology. It shifts students from passive consumers of digital diagrams to active, collaborative constructors of visual knowledge, a skill essential for tackling complex environmental problems.
- Sustainability provides the context for innovation. The challenge of "restoring our oceans" or designing a biomimetic solution provides a rich, meaningful, and urgent context that drives student engagement and justifies the use of sophisticated digital tools. It answers the student's question: "Why are we learning this?"

**Diagram 5: The Symbiotic Triangle (Venn Diagram)**

**Description:** A three-circle Venn diagram, each circle representing one core concept.

**Circle A: Innovation.** Keywords: *Inquiry-Based Learning, Biomimicry, Experiential Learning (Planetariums), Interdisciplinary Projects.*

**Circle B: Digital Transformation.** Keywords: *Virtual Labs, Satellite Data, AI Visualization (Mermaid), Collaborative Annotation (Hypothesis), Diagramming Tools (Draw.io).*

**Circle C: Sustainable Science Education.** Keywords: *Education for the Anthropocene, Climate Action, SDGs, Real-World Problem-Solving, Ethical Reasoning.*

**Overlap A+B (Digitally Enhanced Innovation):** *Online collaboration spaces for project design, using AI to create mind maps of complex ideas.*

**Overlap B+C (Digital Tools for Sustainability):** *Using satellite data to monitor local deforestation, annotating diagrams of carbon capture technologies.*

**Overlap A+C (Innovative Sustainability Pedagogy):** *A biomimicry design challenge, a school project to restore a local waterway.*

**Centre (A+B+C - THE SYMBIOTIC TRIANGLE):** *The CDEC project—students using digital satellite data (B) in an innovative, project-based format (A) to develop entrepreneurial solutions for climate sustainability (C).*

**Conclusion:** Educating Symbiotic Thinkers for an Interconnected WorldThe challenges of the 21st century are too complex to be addressed by single-discipline, rote-learned knowledge. They demand a new kind of thinker—one who is as comfortable with a satellite data stream as they are with the principles of biomimicry, and who approaches every technological problem with an ethical and sustainable mindset.

The symbiotic triangle of Innovation, Digital Transformation, and Sustainable Science Education provides a roadmap for cultivating this new generation. *Innovation* sparks the curiosity and drive to explore; *digital transformation* provides the powerful, real-world tools for that exploration; and *sustainability* anchors the entire endeavour in the urgent task of building a better, more equitable, and more resilient society. By consciously weaving these three threads together, educators can transform science education from a compulsory subject into a vital, empowering, and hopeful discipline—one that equips learners not just to understand the world, but to innovate within it and sustain it for the future.

Thank you for your patience in listening.

## PAPER 2

### LEVERAGING MULTIMEDIA RESOURCES IN THE TEACHING AND LEARNING OF THE BIOLOGY IN PUBLIC SECONDARY SCHOOLS IN ORUMBA SOUTH LOCAL GOVERNMENT AREA OF ANAMBRA STATE

<sup>1</sup> Dr. Eze Irene.F, <sup>2</sup>Engr. Mokwe Celine N, <sup>3</sup>Umeadi Somtochukwu F

febinno43@gmail.com, nknokwegmail.com

<sup>1-3</sup>Department of Computer Science Education

<sup>1-3</sup>Federal College of Education Technical Umunze, Anambra State, Nigeria

#### Abstract

*The study reviewed the influence of leveraging multimedia resources in teaching and learning Biology in public Senior Secondary Schools in Orumba South L.G.A. The population of the study consists of four hundred and fifty (457) of SS 11 students and 13 biology teachers in the 13 government secondary schools in Orumba South L.G. A. Simple random sampling method was used to select two hundred and thirty nine (239) comprising of two hundred and thirty one (231) SS11 students and eight (8) Biology Teachers from 8 schools in Orumba south L.G.A. Anambra State. Instrument for data collection was questionnaire of 24 items. The questionnaire were distributed by the researcher with the aid of research assistant to ensure 100% return. Mean were used for data analyses. The findings show that using multimedia resources in teaching and learning biology have a positive influence as it facilitates effective teaching as well as enhancing students' achievement in Biology thereby yielding sustainability in education. It was recommended, among others, that stakeholders in secondary schools (government, parents and other concerned citizens) should provide the needed multimedia devices to aid effective teaching and learning of Biology in secondary schools.*

**Keywords:** Multimedia Resources, Teaching and learning of Biology

#### Introduction

Education has received a great deal of attention all over the world. This is because it is the catalyst for any meaningful development in any nation. It is also regarded as the paramount importance to the national growth and development. Nations all over the world, especially the developing countries like Nigeria are making frantic efforts towards embedding sustainability principles into their teaching, research and educational institutional governance. This expectation aligns with sustainable development goal 4, which emphasizes the rate of education in fostering sustainable life style, human right, gender equality and global citizenship (United Nation 2015). Sustainable education, often termed education for sustainable development (ESD), is a transformative form of learning that equips individual with the knowledge, skills, values and attitudes necessary to become active to more just, inclusive and environmentally responsible world (Sterling 2011, Leicht et al, 2018). It requires not only curricula integration but innovative teaching and learning which according to the United Nations Education Science and cultural Organization (UNESCO) in Ossai and Ajudeonu (2019) is a general change that is deliberate and must never be regarded as simple adjustment. UNESCO added that innovation refers to any persistent change in the patterns of behavior of members of an identified social system. These changes are needed to increase efficiency and improve quality and equity in learning opportunities. Therefore, any move in education to accommodate new knowledge, remove

obsolete ones and adopt multidisciplinary orientation is likely an innovation in education. In embracing sustainable education through innovative teaching and learning, one can integrate multimedia resources in classroom teaching and learning. Innovative teaching method aim to enhance students learning through active engagement and integration of new approaches and technologies. According to Khaimen (2015), innovative teaching incorporate technology "into teaching learning process" to create rich learning experience for students and a rewarding teaching experience. One of the innovative teaching methods is use multimedia resource.

Multimedia is a combination of more than one media type such as text (alphabetic or numeric), symbols, images, pictures, audio, video, and animations usually with the aid of technology for the purpose of enhancing understanding or memorization (Guan *et al.*, 2018). According to Kstev & Trtovac (2014) multimedia implies "means of communication through multiple media", whereas a multimedia document is "a document (a set of structured information) which comprises information coded in at least one continuous (time-dependent) medium and in one discrete (time-independent) medium. The term "multimedia device" refers to any electronic gadget that can play more than one digital media format at once. The primary function of multimedia is for the purpose of communication. Its characteristic features such as interactivity, adaptability, visualization, and integration of different media improve learning and cater for students' unique needs. Thus, students' individual differences and learning style are effectively addressed. Multimedia provides learners with the necessary information for their learning and turn abstract concepts into a visible representation of materialized examples, students can easily have the link between what they learn and the world of work, and develop the critical thinking. It helps them to be creative and good innovators. Abdulrahman *et al.*, (2020) emphasize that multimedia resources have the properties of interaction, integration, and diversity that help people to share information or ideas with digital content that deliver information to people for a better understanding of concepts. However, it is also very necessary to relate the use of multimedia to socio-cultural context and background of teachers and students when it comes to diversity and integration so that it becomes relevant in a given learning environment of the society. As confirmed by Ilhan & Oruç (2016); multimedia provides easiness and facilities in learning, as it helps students to learn new information and increases their academic achievement compared to traditional instruction. According to Patel (2013), using multimedia in teaching and learning increases students' interest in the lesson, widening students' knowledge and understanding through abundant information it offers. In addition, using multimedia in teaching is also flexible. The context can be created not only in the classroom but also after class. Multimedia technology helps the teacher to represent lessons in a more meaningful way (Jayashree, 2017). Presentations of lesson notes are prepared with the help of multimedia tools as per the requirement and audio-visual presentation is made in such a way that the students grasp the content and are motivated to pay attention on the content being presented and retain the information for longer time. Some of the multimedia technologies are Power point presentation, educational videos on U tube, Gyan Darshan broadcast, NPTEL video lectures, SWAYAM courses, MOOC etc. Educators give special prominence to biology among the sciences because of its educational values, its relationship to man as a living organism, its special field of investigation and interconnection with the other sciences (as cited in Yeboah, 2014).

Biology is one of the major branches of sciences which deals with the study of life and structure of plants and animals that exposes man to adapt well to the modern development (Marf, 2017). There are different types of Biology specialties; examples include Etiology, Ecology, Botany, Zoology, Microbiology etc. Biology has generated its share of controversies, including evolution, cloning and genetics engineering, global warming ,premature species extinction and animal right and animal suffering human overpopulation (Leonard 2017).the goal of biology in

school is to develop scientifically literate citizens who can think logically and act rationally as well as transmit the same value to the next generation. Biology helps individual to understand himself, part of his body and its function, enabling individuals to understand the need to maintain good health, promote understanding of the relationship of man to his environment, prepare individuals for vocational selection such as medicine, dentistry, agriculture, etc. It also inculcate in individual scientific attitudes and skills in solving personal, social and environmental problems. Achieving this in the traditional learning environment thus the role of education in fostering sustainable development. The knowledge of biology is very important in our secondary schools and there is a need for effective teaching and learning to take place during class room instruction. The mastery of a subject is determined by the performance of the students in such a subject at a prescribed examination. Any interactive activity between a teacher and the students is expected to produce learning outcomes in the learners. Anigbogu in Nwankwo and Obiakor (2020) noted that students' performance in biology is low in both national and state examinations. A number of reasons were identified to be accountable for the poor performance of students in biology. These include the science curricula, teacher's methods of teaching, parents, government, lack of science facilities and others (Ahiakwo, 2013). Survey from schools (Ajayi, 2017) revealed that inadequacy of good instructional materials, equipment and laboratory facilities in the schools also affect negatively the effective learning of biology in the schools. Given these challenge, this paper tends to investigate the perceived view of effective utilization of multimedia resources in teaching and learning biology in public senior secondary schools in Anambra State

### **Purpose of the Study**

The purpose of this study is to investigate the influence of leveraging multimedia resources in teaching and learning biology in secondary schools in Orumba South local government Area. The study specifically sought to find;

1. The Various multimedia resources available for teaching and learning biology in secondary schools in Orumba South Local Government Area.
2. The Influence of multimedia resources in teaching and learning biology in secondary schools in Orumba South Local Government Area.
3. Problems hindering the use of multimedia in teaching and learning biology in secondary schools in Orumba South Local Government Area.

### **Research Questions**

The following research questions guided the study;

1. What multimedia resources are available for the teaching and learning of biology in Orumba South Local Government Area of Anambra State?
2. What is the influence of multimedia resources in the teaching and learning of biology senior secondary school in Orumba South Local Government Area of Anambra State?
3. What are Problems hindering the use of multimedia in teaching and learning biology in Senior secondary schools in Orumba South Local Government Area of Anambra State?

### **Methodology**

Descriptive survey research design was adopted for this study. According to Mbah and Udegbe, (2014), the survey attempt to examine the existence of occurrence of phenomenon of variability. It is usually employed by collecting data on and describing in a systematic manner the characteristics of the facts about a giving population from the few items considered being the representative of the entire group. The choice of this research design was considered appropriate because of its advantages of identifying attributes of a large population from a group of individuals. The total population of the study was four hundred and fifty seven (457) which

comprises of four hundred and forty four (444) SS 11 students and thirteen (13) Teacher in public secondary schools in Orumba south L.G.A. Simple random sampling method was used to select two hundred and thirty nine (239) comprising of two hundred and thirty one (231) SS11 students and eight (8) Teachers from 8 schools in Orumba south L.G.A. Anambra State. Instrument for data collection was questionnaire of 24 items which was validated by two expert in

College of Education. Four point rating scale consisting of strongly agree (SA) = 4 points, Agree (A) = 3 points, Disagree (D) = 2 points, Strongly disagree (SD) = 1 point. The questionnaire was administered to thirteen (13) respondents. Any item with a mean value of 2.50 and above was regarded as agree and any item with mean value below 2.50 is regarded as disagree. The reliability of the instrument was determine using Cronbarch Alpha which yielded a coefficient of 0.82 showing that the instrument was reliable for data collection

## Results

The results of the analysis of data collected are presented in line with the research questions.

**Research Question 1:** What multimedia resources are available for the teaching and learning of biology in Orumba South Local Government Area of Anambra State ?

**Table I: Mean response scores of teachers and students on various multimedia resources available for the teaching and learning of biology in Orumba South Local Government Area of Anambra State**

S/N	ITEMS	SA	A	D	SD	N	MEAN	REMARK
1.	Computer	100	89	25	25	239	3.10	Agree
2.	Projector	24	26	89	100	239	1.89	Disagree
3.	Interactive white board	32	30	92	100	239	2.03	Disagree
4.	Digital camera	21	29	86	103	239	1.86	Disagree
5.	Mobile phone	96	80	33	30	239	3.10	Agree
6.	Compact disc read-only(CD Rom) and digital versatile Disc (DVD)/Blu-ray disc(BDA)	26	29	96	88	239	1.97	Disagree
Grand Mean							2.33	Disagree

From Table 1, the mean responses of the teachers and students on the available multimedia resources are presented. Item 1 and 5 with the mean scores of 3.10 on each item was only agreed as the multimedia resources available for teaching and learning of Biology in Orumba South Local Government Area while items 2, 3, 4, and 6 were all disagreed because they fall below cutoff point of 2.50. This implies that most of that these items were not available for teaching and learning Biology in Orumba South Local Government Area

**Research Question 2:** What is the influence of multimedia resources in the teaching and learning of biology senior secondary school in Orumba South Local Government Area of Anambra State?

**Table 2: Mean Response Scores of teachers and students on the Influence of Multimedia Resources in the Teaching and Learning of Biology in public Senior Secondary School in Orumba South Local Government Area of Anambra State**

S/N	ITEMS	SA	A	D	SD	N	MEAN	REMARK
7.	Multimedia allow biology images clear and improve retentive memory among students.	100	89	25	25	239	3.10	Agree
8.	It helps students to be creative and good innovators.	96	80	33	30	239	3.01	Agree
9.	It increases students' academic achievement compared to traditional instruction.	94	88	26	31	239	3.02	Agree
10.	Increases students' interest in biology lesson.	97	74	34	34	239	2.97	Agree
11.	It increases interaction between teachers and students.	96	80	33	30	239	3.10	Agree
12.	Develop students' communicative competence.	88	79	34	38	239	2.90	Agree
13.	Deeper understanding of biology lesson.	76	88	40	35	239	2.85	Agree
14.	It boost the quality of teaching and learning.	99	97	21	22	239	3.14	Agree
15.	Fast access to information.	100	99	20	20	239	3.16	Agree
16.	It causes distraction.	24	26	89	100	239	1.89	Disagree
Grand Mean							2.91	Agree

Table 2 shows the mean response scores of teachers and the students on influence of multimedia resources in teaching and learning biology. From the table, all the items had mean scores greater than the acceptance (critical) value of 2.50 except item 16 which is 1.89, Hence the respondents; teachers and students agreed that the items are the likely ways Multimedia teaching strategy influences teaching and learning of biology in the schools.

**Research Question 3:** What are the Problems hindering the use of multimedia in teaching and learning biology in Senior secondary schools in Orumba South Local Government Area of Anambra State?

**Table 3: Mean response score of teachers and students on the Problems hindering the use of multimedia in teaching and learning biology in Senior secondary schools in Orumba South Local Government Area of Anambra State**

S/N	ITEMS	SA	A	D	SD	N	MEAN	REMARK
17.	Limited Accessibility And Network Connection.	100	84	25	30	239	3.06	Agree
18.	Absence of technical support staff.	100	94	21	24	239	3.12	Agree
19.	Lack of effective training.	100	93	22	24	239	3.13	Agree
20.	Limited time.	38	42	80	79	239	2.16	Disagree
21.	Lack of teachers IT skills.	100	88	31	20	239	3.12	Agree
22.	Lack of security to prevent theft and vandalization.	76	88	40	35	239	2.85	Agree
23.	Lack of power supply	99	97	21	22	239	3.14	Agree
24.	Students are not interested	24	26	89	100	239	1.89	Disagree
Grand Mean							2.81	Agree

The Table 3 shows that for item 20 and 24 with mean response score of 2.16 and 1.89, the teacher did not agree that there is limited time and students are not interested. However, other item with just 2.5 and above the teacher and students agreed that Limited accessibility and network connection, Lack of power supply, Lack of effective training, Lack of teachers IT skills and Limited technical support are the Problems hindering the use of multimedia in teaching and learning biology in public Senior secondary schools in Orumba South Local Government Area of Anambra State.

### **Discussion**

From the findings it shows that the multimedia resources available for teaching and learning of biology in secondary schools in Orumba South Local Government area are only mobile phones and computer. Though there was computer and mobile phone, can still be of help as it can help teachers to prepare their class work and as well as present instruction. This is in line with the findings of Bailicato (2015) who saw mobile phone as a multimedia resource that is helpful to school in the area of assisting teachers and students in preparing classroom instructions and in doing assignment respectively.

In research question two, the respondents agreed that extensive use of multimedia resources in teaching and learning teaching provides easiness and facilitates instruction processes, helps students to learn new information and increases their academic achievements thereby yielding sustainability in education as confirmed by Ilhan and Oruç (2016). Another major revelation of the present study as perceived by the respondents is that it increases students' interest in biology lesson, increases interaction between teachers and students, develop students 'communicative competence, deeper understanding of biology lesson, boost the quality of teaching and learning among others. This is in line with De Sousa, *et al.*, (2017), which reveal that when students use multimedia, it helps them to build their knowledge and skills as a result of using different teaching and learning approaches.

In research question three, the findings shows that several barriers have posed as hindrance to implementation of multimedia in teaching and learning of biology in secondary schools such as poor funding. This agrees with the views of Albidewi and Tulb, (2014) who assert that the successful user acceptance of any technology to enhance teaching and learning requires significant investment by the institution in training of staff and monitoring of learners to ensure that the technologies are used effectively. Another hindrance revealed by the research is teacher barrier which align with Mapuva and Muyengwa (2019) who designated that the teaching staff are the policy implementation members of educational institution anywhere in the world through adequate academic communications to learners. Furthermore, teacher's ability to use and control the electronic technology, their attitudes towards the electronic technology devices, and their teaching styles, all affect how well they will accept the technology (Al-Harbi, 2011).

### **Conclusion**

The conclusions drawn based on the findings from the study shows that only computers and mobile phones were only multimedia resources available for teaching and learning of Biology in public secondary schools in Orumba South L.G. A. Anambra State. Multimedia influences teaching and learning biology by allowing biology image to be clear and improve retentive memory among students, helps students to be creative and good innovators, increases students' academic achievement compared to traditional instruction, increases students interest in biology among others. Limited accessibility and network connection, Lack of power supply, Lack of effective training, Lack of teachers IT skills and Limited technical support staff among others are the Problems hindering the use of multimedia in teaching and learning biology in public Senior secondary schools in Orumba South Local Government Area of Anambra State.

## Recommendations

On the basis of the findings of this study the following recommendations were passionately made;

1. Teachers should be trained on the use of multimedia in education. This will enable them appreciate multimedia usage and inculcate the practice into their students. On the long run, this will make the whole educational cycle multimedia-compliant and as such improve the general wellbeing of the nation.
2. Government should provide multimedia facilities in various institutions of learning so as to boost the educational sector and raise it to a standard where it can compete with what is obtained in the western world. This will enable Nigerians stand out and have a say in the multimedia age which has come to stay.
3. Government should provide regular power supply to ensure that Biology laboratories are functional.
4. Every school should ensure supportive environment and conditions to not only the teaching of biology in schools but all other science related disciplines that require computer services.
